

COSFOM Project

helps to restore forest and water resources for communities to be prepared for the impact of climate change

- *25 villages participate in Ukhrul District*
- *Project staff is based in the District Forest Office in Ukhrul*

Water Resource Conservation Committee

guides the work in the village

- *Each household in the village is a member of the Water Resource Conservation Group*
- *Each village elected one WRCC*
- *The WRCC members are elected for up to 4 years*
- *If you need any information, contact your WRCC or any district project staff for help*

Water Conservation

through springshed revival, river conservation, and rainwater harvest

- *The project helps to find and protect the source of your village spring*
- *Villagers build small ponds or trenches to catch rainwater at the source*
- *Protection helps to increase amount and quality of water for your village to live*
- *Rainwater harvest from roofs contribute to increased water supply*

Forest Protection and rehabilitation through community nurseries and reforestation

- *Community nurseries are producing seedlings for bringing back the forests*
- *Forest closures are protected by village warden to allow the forest to become healthy again*
- *Riverbanks are reforested to avoid erosion and to improve water quality to increase amount of fish*

Livelihood Improvement through community infrastructure and Self-Help Groups

- *Women are supported to improve their income through technical training and financial support*
- *Each SHG identifies their economic activities and is provided with seed money*
- *The project supports with marketing and sale of products*
